Mods, please sticky! -This seems like the best place for this post, so please move if needed but do not delete!

I know there are many people here who enjoy building but, for various reasons, can't always get connected to SUP. Building without being able to pick approved props from the whitelist can become a bit of a chore, this is why I will teach you the few simple steps it takes to install the SUP whitelist into GMod's standard "spawnlists" folder for any use you so wish.

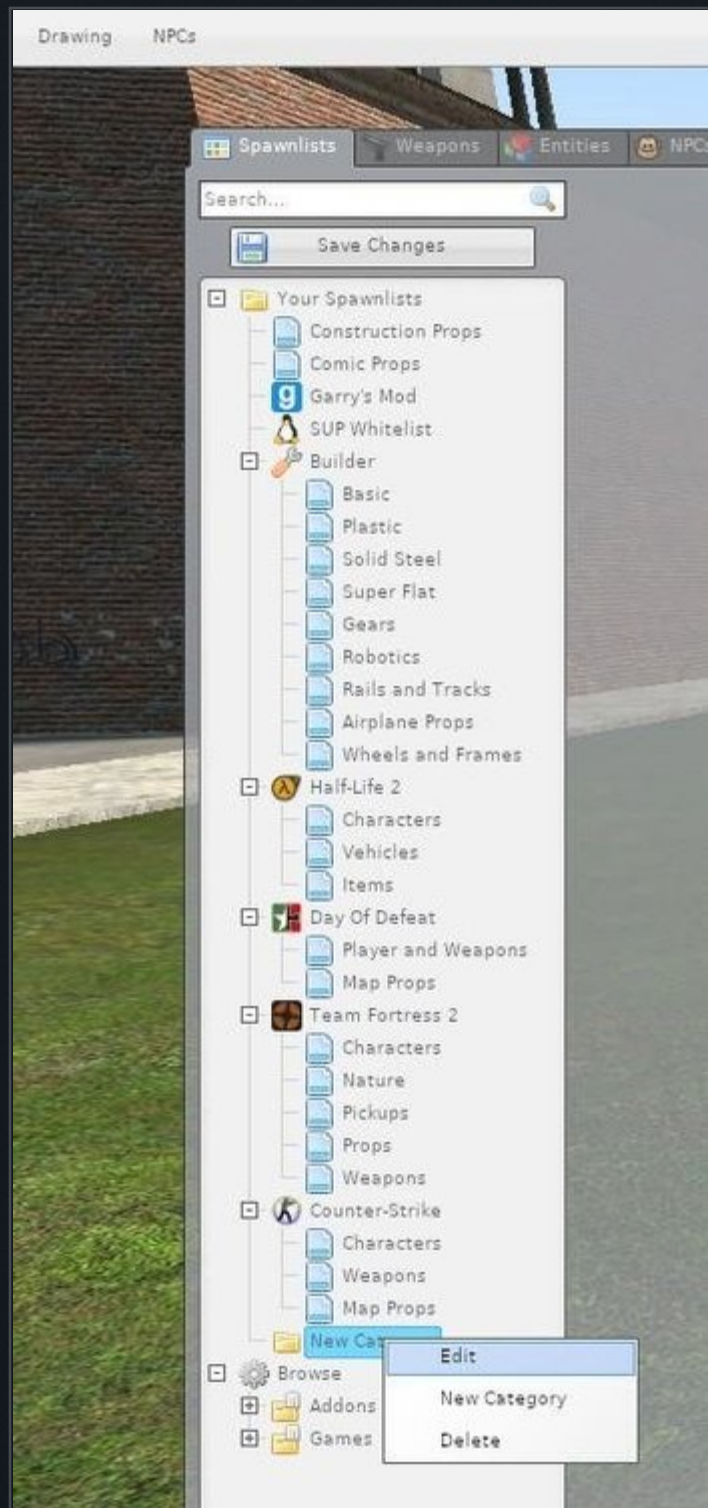

STEP 1.

Begin a new, single player, game of GMod and use F1 to hold open your Props Menu. Right click on the "Your Spawnlists" folder at the very top of the list on the left hand side and select "New Category" as pictured.

STEP 2.

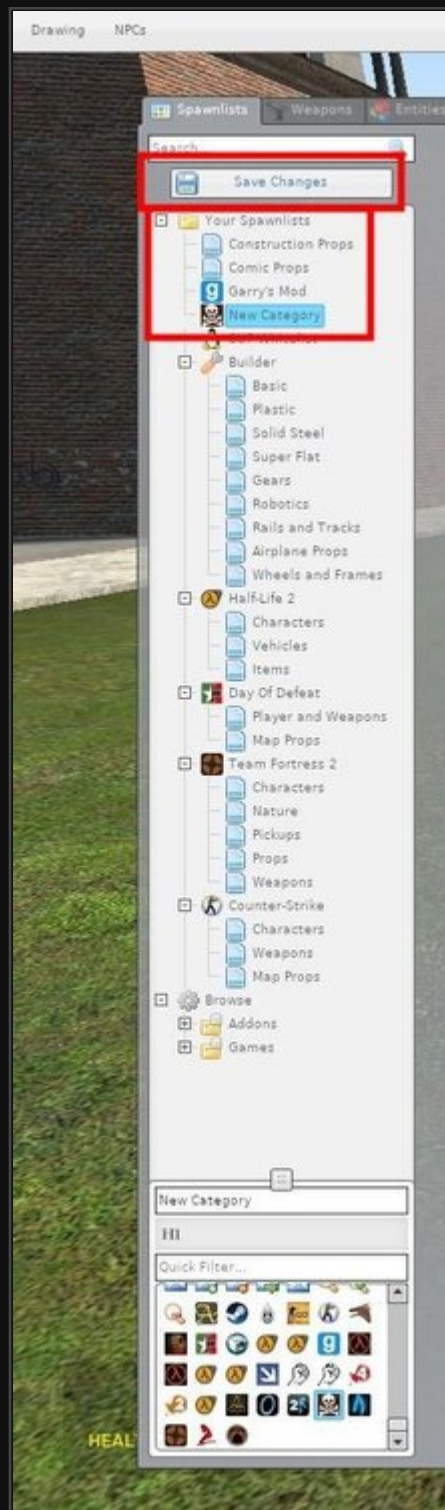

Right click on the "New Category" folder that you just created and rename it to "SUP Whitelist" and select a picture from the box on the bottom left of your screen... As you can see I have completed this step if you look towards the top of the list. I chose "tux" because aStonedPenguin...that's why.

STEP 3.

This part is actually very critical! Drag and drop your New Category aka "SUP Whitelist" folder so that it is the FOURTH folder which contains props in this list (you may change the ordering once

we're done with the tutorial). Make sure to click the "Save Changes" button or you'll have to repeat everything up until now.

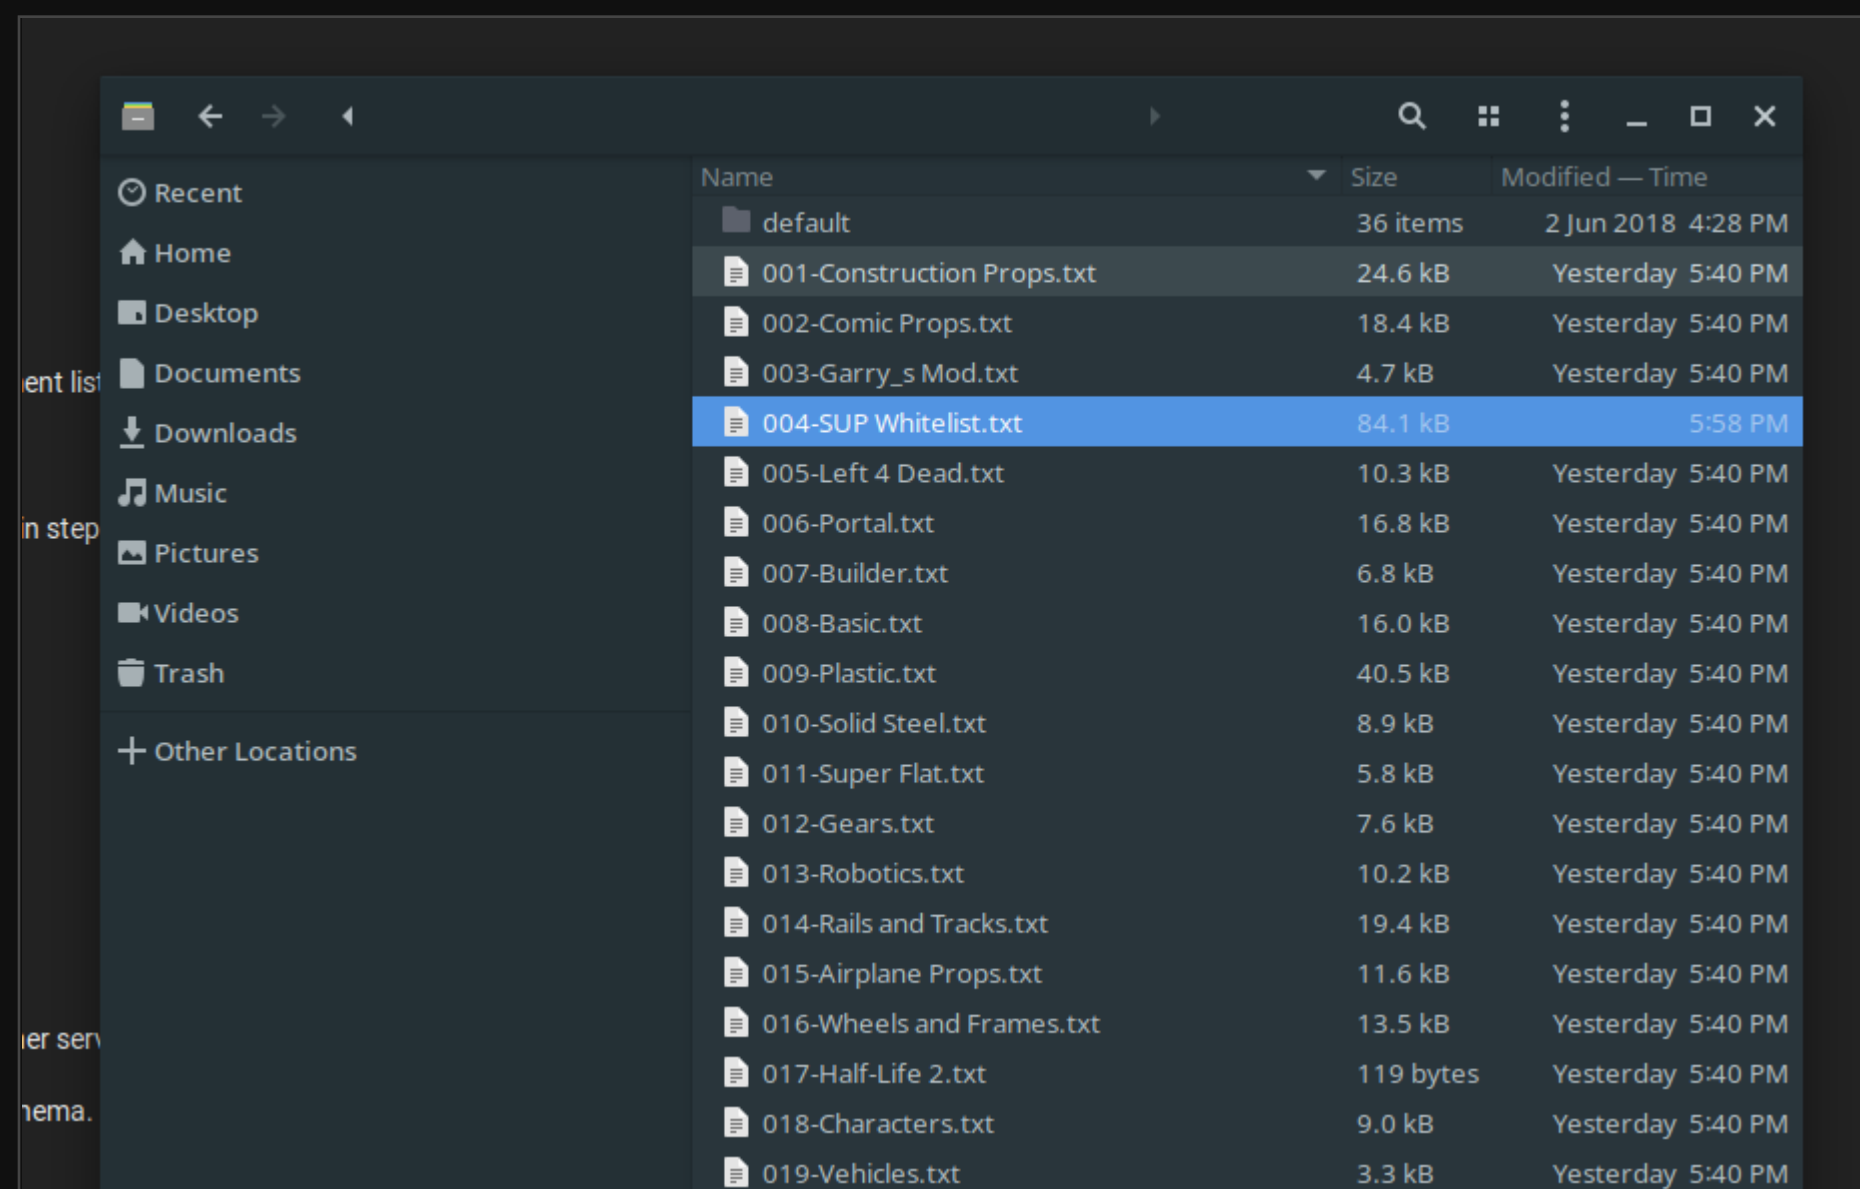

STEP 4.

Attached to this post is a file titled "004-SUP Whitelist.txt". Feel free to read it, it's just a JSON document listing out all of SUP's whitelisted props as of 1/15/2019. Place this folder in:

`/Steam/steamapps/common/garrysmod/garrysmod/settings/spawnlist/`

This should overwrite the "004-SUP Whitelist.txt" which was created when you saved your changes in step 3.

folder). If you don't have access to such a beast-of-a-tool you can tinker around with copy/pasting out of Excel and attempting to match the format.

GMod uses slightly malformed JSON and any of the slightest 'unconformities' can render the file useless.

GOING FORWARD:

The whitelist changes through time. If you recognize a change please let me know so I can keep this post up to date. If you are someone who can use a PIM system and would like the template files just let me know!

I'd like to thank SUP and it's team for running the most badass server on GMod. Keep it up guys!
